U.S. Patent and Trademark Office PTO-303 (Rev. 04-01)  Advi	sory Action	Part of Paper No. 18	

Continuation of 5. does NOT place the application in condition for allowance because: In response to applicant's argument that Hattori et al. and Mo et al. fail to teach wherein each gettering plug comprising doped fill material containing a plurality of gettering sites, examiner disagree, Hattori teaches the method of forming cavities, filling them with fill material and forming condition to getter impuritie (Office Action mailed 08/01/2003, pages 2-3), Mo teaches that each gettering plug (FIG. 1A, 28) comprises doped fill material containing a plurality of gettering sites wherein the doped fill material is polysilicon formed by deposition of the polysilicon and the dopant in the cavity (FIG. 1A, 14) and wherein the dopant ion is phosphorus (col. 6, lines 39-51 and FIG. 1A). It would have been obvious to one of ordinary skill in the art of making semiconductor devices to combine the teaching of Hattori and Mo to enable the gettering plug of Hatto to be formed and furthermore to enhance defect gettering (col. 6, lines 48-51).
